Lab #11

4/11/17

Input:

problem_01.cpp

There is no input for this problem. The dateTwo object's parameters were set to the current date, 4-11-17.

Output:

problem_01.cpp

dateOne was created using the default constructor, which set the date to 1-1-2017. dateTwo was set to the current date as stated above. Both Date objects were then printed out. newDate was then created using a constructor that accepts a Date object as its parameter, and dateTwo was passed to it. newDate was then printed, which contained the same date as dateTwo.
