

Jonah Lergen

Lab #09

3/28/17

Input:

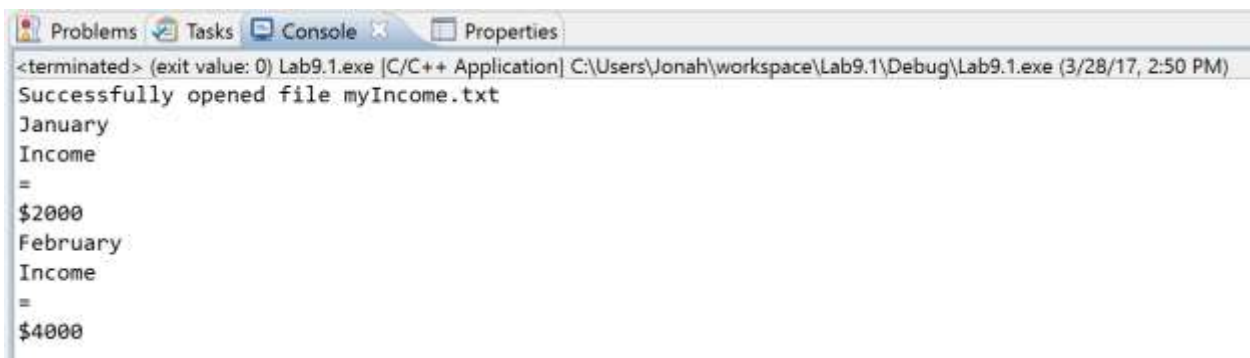

problem_01.c

There is no input for this problem.

Output:

problem_01.c

The program successfully opens the file named myIncome.txt and prints the contents. It is optimal to use fgets, but since the question called for fprintf and you are scanning per “%s” it reads the file word for word instead of line by line, hence why the output looks different than the actual file itself.

```
<terminated> (exit value: 0) Lab9.1.exe [C/C++ Application] C:\Users\Jonah\workspace\Lab9.1\Debug\Lab9.1.exe (3/28/17, 2:50 PM)
Successfully opened file myIncome.txt
January
Income
=
$2000
February
Income
=
$4000
```
