

Jonah Lergen

Lab #05

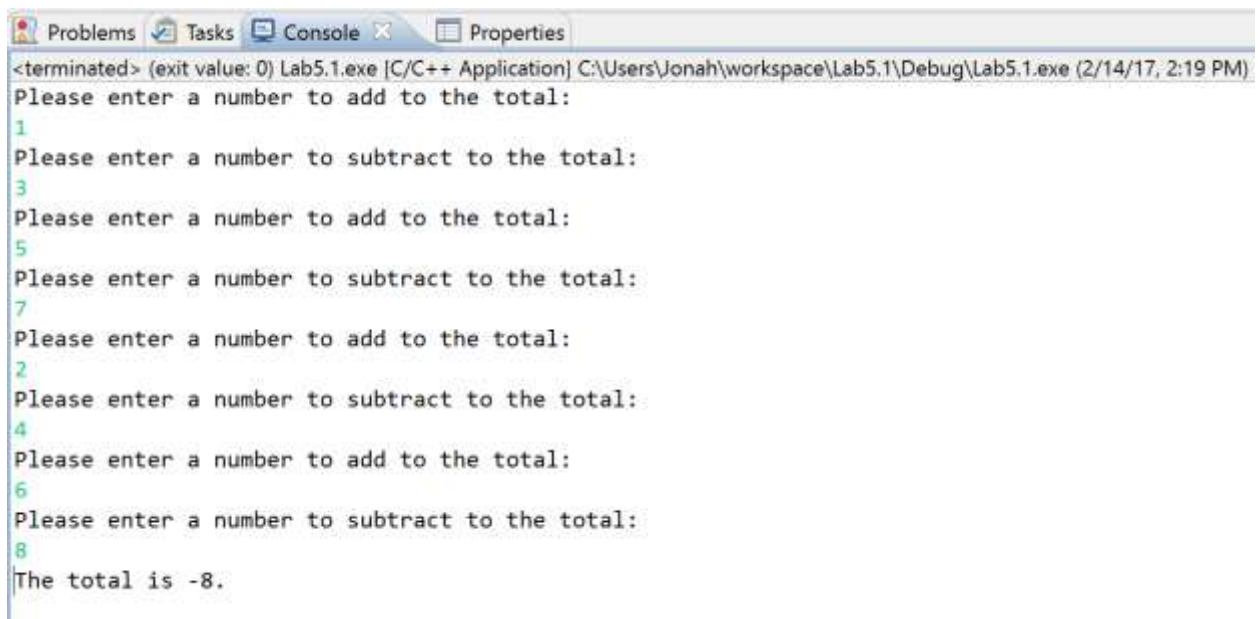

2/14/17

Input:

The adder and subtracter method are each run 4 times for a total of 8 total calls. Each time the user types in a number to add or subtract from the total respectively. In this case, I chose “1,3,5,7,2,4,6,8” to test the total.

Output:

After running the program, it successfully prints “-8” to the console as the total.
